PROFESSIONAL SUMMARY

MERN Stack Developer focused on building scalable and maintainable full-stack systems. Strong in backend architecture, REST API design, authentication mechanisms, and structured data handling. Experienced in React and Redux for developing efficient, state-driven interfaces. Emphasizes clean code, performance optimization, and consistent data flow across applications.

TECHNICAL SKILLS

Frontend: HTML, CSS, JavaScript, React.js, Redux, Tailwind CSS, MUI

Backend: Node.js, Express.js, MongoDB, REST APIs, JWT Authentication, WebSockets

Tools: Git, GitHub, Postman

EXPERIENCE

React Developer – SurveyHeart

10/2024 – 10/2025

- **Community Platform:** Developed a public community forum allowing users to browse discussions without authentication. Implemented guarded actions for creating and editing threads, with login redirection and navigation state restoration post-authentication
- **FAQ Management System:** Built a dynamic FAQ module consuming admin-configured data, rendering platform-specific answers (Android, iOS, Web) with category-based organization on the homepage.
- **Performance Optimization:** Optimized rendering performance by minimizing unnecessary re-renders using memoization techniques. Improved large dataset handling through pagination, lazy loading, and debounced API calls.
- **Multi-Tenant Platform (Subdomain System):** Developed a configurable UI system enabling businesses to create personalized subdomain pages with custom branding, including modules for lead capture, appointment booking, batch management, and customer lifecycle tracking.
- **Workflow Modules (Business Operations):** Built interconnected modules for follow-ups, appointments, batch management, and customer state tracking (active/inactive/pending), driven by user actions from subdomain pages.
- **File Upload Integration:** Integrated secure file upload flows by coordinating with backend-controlled AWS upload mechanisms, improving data security and reducing frontend exposure.

PROJECTS

Full Stack Ride Booking System

- Designed ride lifecycle system managing state transitions across user and captain workflows

- Built real-time communication using WebSockets for ride updates and synchronization
- Integrated Razorpay payment gateway with secure verification and failure handling
- Developed REST APIs using Node.js and Express with JWT-based authentication
- Designed MongoDB schemas for rides, users, and transactions
- Handled edge cases including payment failures and state inconsistencies

EDUCATION

B.Tech – Electronics and Communication Engineering

2019 – 2023

Swarna Bharathi Institute of Science and Technology
