Professional Summary

MERN Stack Developer with experience building scalable web applications using React, Node.js, Express, and MongoDB. Strong in frontend architecture, API integration, and real-time systems, with hands-on experience developing full-stack applications and secure backend services.

Education

B.Tech – Electronics and Communication Engineering

2019–2023

Swarna Bharathi Institute of Science and Technology

Technical Skills

Frontend : HTML, CSS, JavaScript, React.js, Redux, MUI, Tailwind CSS

Backend : Node.js, Express.js, MongoDB, REST APIs, JWT, WebSockets

Tools : Git, GitHub, Postman

Experience

SurveyHeart

Oct 2024 – Oct 2025

- Developed an authentication-based community forum enabling users to create, edit, and manage Q&A threads with controlled access.
- Built a role-based FAQ management system with dynamic rendering on the homepage through API consumption.
- Integrated REST APIs to manage data flow between frontend and backend systems.
- Implemented pagination, lazy loading, and request debouncing for efficient handling of large datasets.
- Optimized UI performance using memoization techniques to reduce unnecessary re-renders.
- Improved file handling security by shifting AWS uploads from frontend to backend-controlled flow.
- Developed UI and interaction logic for a multi-tenant platform supporting subdomains, batch flows, and user management.

- Built customer workflows including approval handling, appointment tracking, and follow-up management.

Projects

Uber Clone – Full Stack Ride Booking System

GitHub: github.com/Venkatesh-vis/Uber | Live: uber-three-pi.vercel.app

- Developed a full-stack ride booking platform using **MERN** stack with user and captain workflows.
- Designed ride lifecycle management system to maintain consistent state transitions.
- Implemented real-time communication using **WebSockets** for ride updates and interactions.
- Built backend APIs using Node.js and Express with **JWT-based authentication** and secure access control.
- Integrated **Razorpay** payment gateway with order creation and signature verification.
- Designed MongoDB schemas for managing ride, user, and transaction data.
- Implemented live location tracking and synchronized UI updates using React and Redux.
